Your engagement letters travel by courier.
Your clients' trust shouldn't have to.

A FinBowl product by Gracia Global Advisory

FinBowl

Signed.
Sealed.
Certain.

The only eSign that lives inside your finance office. Legally valid, ISO 27001:2022 certified, and visible to no one but you.

- Legally valid in India
- OTP-verified signing
- Tamper-evident record
- ISO/IEC 27001:2022 certified

WHAT IT DOES

Every confidential document, signed and stored in one place.

Upload a document, add your signers, and send. Each signer receives an email invitation, proves it is really them with a one-time code, and signs. No printing, no scanning, no couriering, and nothing for your client to install.

The moment everyone has signed, FinBowl fetches the final copy and stores it securely against the record, with a complete, time-stamped history of who did what, and when.

- **Legally valid in India.** Signatures are executed through a licensed eSign framework, and every document carries a legally recognised audit report.
- **One managed home** for every signed document, instead of scattered inboxes and desktop folders.
- **Built into FinBowl,** the same console that runs your reconciliation, purchases and billing.

HOW SIGNING WORKS

Simple for your client. Controlled for you.

OTP-verified email signing

The signer confirms ownership of their email with a one-time code before they can sign. Identity, established.

Authenticate before viewing

For sensitive documents, require the recipient to verify themselves before the document even opens.

Sequential or parallel order

Signer one first, then signer two. Or everyone at once. You decide whether order matters.

Keep others in the loop

CC up to ten people on the invitation, so partners and teams see what went out.

Deadlines you control

Set the expiry date per document, and extend it if a signer needs more time.

THE SIGNING JOURNEY

From upload to a stored, signed copy, in five steps.

1. **Create**
   Upload the PDF and give it a name.
2. **Add signers**
   Name, email, and where each signature sits on the page.
3. **Send**
   Invitations go out, in sequence or to everyone at once.
4. **Sign**
   Each signer verifies their identity with a one-time code and signs. You watch progress live.
5. **Sealed**
   FinBowl fetches the final signed copy and stores it permanently, downloadable any time.

YOU STAY IN CONTROL

Life happens. eSign keeps up.

Resend

A signer missed the invitation? Send it again in one click.

Extend

A deadline approaching? Push the expiry out before it lapses.

Cancel

Withdraw a document any time before it is fully signed.

Track

Live status on every document: who has signed, who is pending, and the full time-stamped history behind it.

Confidential by design.

Engagement letters, mandates, NDAs. The documents you send for signature are the most sensitive papers your firm handles. FinBowl eSign is architected around one rule: **your documents are yours alone.**

- **Creator-only visibility.** Only the person who sent a document can see it. Not colleagues. Not administrators.
- **A history that cannot be rewritten.** Every action is recorded in an append-only trail. Entries are added, never edited or deleted.

ISO/IEC 27001 :2022

ISO/IEC 27001:2022 certified

FinBowl is certified to the global standard for information security management, independently audited across people, process and platform.

Encrypted at rest, always

Originals and signed copies live in private storage, encrypted with hardware-backed keys.

Links that self-destruct

Downloads use short-lived, single-use links. A copied link is a dead link.

Verified at the source

Every status is confirmed directly with the signing authority before anything is recorded, never taken on trust from a notification.

Independently verifiable

The signed PDF carries a tamper-evident digital certificate, backed by a legally recognised audit report.

BILLING THAT'S FAIR

Pay only for signatures that complete.

- **No charge for failure.** A document that is cancelled, declined, or expires before completion costs you nothing. Ever.
- **Billed per signer, on success.** A two-signer agreement where only one signs? You pay for one signature.
- **Everything in one wallet.** Signature usage sits in your FinBowl account, every charge traceable to its document.

Each plan includes a monthly allowance of completed signatures. Beyond that, additional signatures are billed at your plan's per-signature rate.

Additional users ₹1,000 / user / month. Prices exclude GST.

Talk to us

A signing entity is a business you send documents from, each with its own name and details on the signature. Pay monthly, cancel any time. Or pay annually and get **1 month free**. Unused monthly signatures do not roll over.

HOW WE COMPARE

Most eSign tools sell signatures. We seal your finance office.

Most eSign tools	FinBowl eSign
Charge per user seat, every month, whether anyone signs or not	**Signatures included in every plan,** extras billed only when a signature actually completes
Administrators can open anyone's documents	**Only the sender ever sees a document.** Not colleagues, not admins
A standalone app, disconnected from your books	**Native to the platform** running your reconciliation, purchases and billing
Security claimed on a website	**ISO/IEC 27001:2022 certified,** independently audited
